

EDWARDS

*A new light that's
more visible from
below and far away.
This, you have
got to see.*

And see it, you will. The new Triliptical® AdaptaBeacon Stacklite* shines brighter and projects a larger, more uniform image — for unsurpassed visibility without “hot spots” from every angle and distance.

You can choose from a wide range of light sources — including flashing or steady incandescent or long-life halogen, flashing strobe, and flashing or steady LED. And when it comes to changing lens colors or light sources, nothing could be easier. A removable lens cover lets you make these changes without stack disassembly, and a unique interlock system lets you stack and unstack lens modules — in any order, and with any combination of the five lens colors — in seconds.

Three base modules and mounting options. UL Listed, CSA Certified and CE Marked with an IP65 rating. Plus NEMA 4X and 3R ratings, and PLC compatibility. Fast delivery, too.

You're already accustomed to hearing from us, and now you're going to be hearing a lot more from us, too. With a new signal that's bright and clear — the Triliptical AdaptaBeacon Stacklite.

A new standard, and the shape of things to come.
